Resonance Forecast UI: Predictive Loop Control in the Sommer Ocean

🌊 Resonance Forecast UI: Predictive Loop Control in the Sommer Ocean

Purpose

To visualize and narrate the predicted trajectory of user actions across symbolic, behavioral, systemic, and cultural layers - enabling full loop management control through the Ripple Engine and Future Self voice.

🔮 Core Components

Component	Description
Trigger Point	Activated when a user makes or hovers over a significant decision
Ripple Simulation	Visual map of cascading effects across Blue, Red, and Sommer Ocean layers
Hierarchy of Effects	Scores symbolic, behavioral, systemic, and cultural resonance
Resonance Forecast	Predicts half-life, amplification potential, and mutation likelihood
Voice Playback	Nordic Calm narrates the ripple and prognosis
User Actions	Accept, revise, amplify, archive, or ritualize the ripple

---

🧠 Hierarchy of Effects Model

Layer	Signal Tracked	Prognostic Weight
Symbolic	Glyph encoding, naming, ritual use	High
Behavioral	Repeated user actions, follow-ups	Medium
Systemic	Policy triggers, infra changes	Very High
Cultural	Peer adoption, public resonance	High

📈 Resonance Forecast Output

- **Resonance Half-Life**: Estimated duration of impact (e.g., 3 days, 6 weeks, 1 year)
- **Trajectory**: Amplifying, Stabilizing, Fading, or Mutating

- **Confidence Score**: % likelihood based on historical glyphs and system response
- **Suggested Action**: Amplify, Archive, Transform, or Let Settle

---

🎧 Sample Voice Prognosis (SSML)

```
<speak>
<voice name="Microsoft Server Speech Text to Speech Voice (en-GB, ThomasNeural)">
<prosody rate="medium" pitch="-1st">
<p>
Your glyph has entered the systemic layer.
<break time="300ms"/>
A policy has shifted. A new standard is forming.
</p>
<p>
Estimated resonance half-life: 12 weeks.
<break time="300ms"/>
Cultural adoption is rising.
<break time="300ms"/>
This ripple is amplifying.
</p>
<p>
Would you like to encode this as a legacy standard - or let it evolve?
</p>
</prosody>
</voice>
</speak>
```

🧭 User Interface Elements

- **Ripple Map**: Animated visualization of ripple across ocean layers
- **Forecast Panel**: Displays hierarchy scores, half-life, and trajectory
- **Voice Console**: Playback of Future Self narration and ripple prognosis
- **Action Buttons**:
  - “Amplify This Ripple” → Suggest to others, publish as glyph
  - “Let It Settle” → No action, allow natural decay
  - “Transform Into Standard” → Submit for policy ritualization
  - “Archive Ripple” → Store as private legacy

🚀 Why This Is Unprecedented

- No known system combines symbolic encoding, voice narration, and predictive modeling of user impact
- Empowers users to see, shape, and steer the long-term effects of their actions
- Embeds ethical foresight and legacy thinking into everyday interaction

---

This is the first step toward a self-aware, user-participatory system - where every ripple is visible, every choice is narratable, and every glyph is a living artifact of care.
